

FIVE QUESTIONS TO WAKE YOUR WORLD

Prefatory note for people in Greece: The way that Del Bigtree (who is Christian) is according virtual equality of treatment to both the Christian tradition of Christmas and the pre-Christian Jewish tradition of Hanukkah inspires thoughts that in Greece it might be appropriate on such occasions to give similar treatment to Greek pre-Christian tradition, i.e. to [Hellenism](#).

(Starting at 1.56.24)

I've been thinking about that myself, you know, how I grew up. I've talked about how my Mom raised me to not care what other people think, that the most important thing is what I think, what I believe, and do my own research and follow my own instincts. I've been travelling a lot. I'm looking forward to getting some time off for my family. We've pre-recorded some really beautiful shows for the holidays but this will be the last show for the next two weeks. We'll be back at the very beginning of the New Year. But I kind of want to leave you with a thought because I know we're all about to go into the holidays here. Some of us have already started with Hanukkah. We're going to be sitting with family members. We're going to be sitting with friends that we may not agree with and it's scary, right? I mean how do I have this conversation? I don't want to be screaming, you know, at each other. I want to enjoy this. But it feels like the future of the world is hanging in the balance. I was on a plane yesterday watching "Inception", the movie. I don't know if you've seen it. I'll give the point. But in it they sort of have this ability to go deeper and deeper into other people's dreams. And the idea is: can you plant an idea, like you're going to plant an idea so deep in this person that they believe it's their own. And that's what they call an inception. It's a really crazy movie to watch from the airplane if you see it you'll know what I mean. The whole idea is like they're trying to figure out whose dream they're in as they go deeper and deeper. Well I came off the plane and I walked out into the concourse and I just saw this sea of masks coming at me. I'm the only one. I swear I'm the only one not wearing one in there, and I remember just thinking I was still in that thought of the dream thinking "Whose dream is this? Whose dream am I living in?" This is certainly not my dream. And if it's not, I should get back into my dream. I should get in control of this situation. And I took a step further. I was thinking "Inception". The idea of planting. They're going to try to plant an idea into somebody. Or a question. And one of the characters says: "If it's ever going to be possible we have to find the simplest form of that question. So that it is planted as a seed that is not going to be convoluted by too much information, which is what brings in outside personality. This person is going to have to believe it was their own thought. And I got to thinking: "That's sort of what I've been saying to you. You've got to plant the question so deep in somebody that they simply go off to begin their own research. Don't try to win the argument over Christmas or Hanukkah. Think "How do I plant the simplest question into those that are around me?" So I've come up with what I think are the top five questions that should be at your dinner table, to help us move forward in getting people to wake up. So here it is: the top five questions to wake up your world. Here it is. We're all in the middle of it. This should make sense to everybody.

Number one question is this: can we bring it up? **If social distancing works, why do we have to wear masks?** Just ask that question. Just ask everyone at the table. They'll have their answers: "Well, I mean because sometimes we're too close together." But just let it go. Don't interject. You know and by the way, there's science just let the question go. Now let's move on to number two. After, you know. We'll have another glass of wine.

Number two. I've got another question. **"If masks work, why do we have to lock down?"** Let that germinate, you know? Move into some pumpkin pie. I'm telling you. People have all their reason. "We have to lock down because, you know, some people aren't wearing the mask, that's why." Or something like that. Let it go where it's going to go.

Number three. Here's the third question. "If lockdowns work, why is virus on the rise?" This is a big one, folks. This is a really big one. Because we are destroying our world. Let's look at it. This graph is going to be available to you. Here's California. Locked down like crazy. One of the most locked down masked states, as I told you. Absolutely no sunshine or life or laughter happening there. This thing is skyrocketing right now. And then we could get into PCR tests and.... but look at that. I mean look how far back. We've been watching them. Gavin Newsom is an insane tyrant, yet none of it is working. It's literally the definition of insanity, right? Could we have the definition of insanity? Do we have that? The definition of insanity is: doing the same thing over and over but expecting different results. I think Gavin Newsom in California and New York, they're all on the rise. Do we have any other graphs? There is nowhere on this earth that is locked down. Germany. Still going up. You know I mean it doesn't. Here we go. The United Kingdom. Locked down in March. They're going back into full lockdown, right? Because their infection rate is skyrocketing. London returns to strict lockdown following a sharp rise in corona virus cases. I could do this all across the world. Here's the point, and by the way, if you are a part of our Newsletter on Monday not only will you have these top five questions. You'll have a link to, you can go and say, "Oh, you think masks are working? Let me go ahead and show you the video from The Highwire where two OSHA (Occupational Safety and Health Administration) experts are going to explain it. And maybe a video of Del's son in a mask and CO2. It will be party favourites. We can take this conversation to another level. But let's get back to the five questions, shall we? OK. Here we go. So we've already got "If social distancing works, why do we wear masks? If masks work, why do we lock down? If lockdowns work, why is the virus on the rise?"

And number four: if the vaccine works, why do I have to still wear a mask? Why do I have to go back to number one? If one, two, three, are true and then four comes the saviour, why back to number one? Why are they telling me I'm still going to have to wear the mask even after the vaccine? Just honestly. Just so you are all aware of that, right? And by the way you'll have a tool set: here it is - here's Fauci saying it. It's all going to be in the newsletter. I'm going to give you these tools. Join our newsletter. Just say: "Hey, here's Fauci saying himself. We have the whole montage. All the most important people saying "Yeah, you're still going to have to wear a mask, because the vaccine doesn't stop infection." So if the vaccine is meant to stop the pandemic why are we still wearing masks?

And here's the biggest one of all. **Number five: "If the vaccine is safe, why are manufacturers protected from liability?"** I'm going to get more and more into this as we move forward because those of you that watch this show know that vaccine makers have no liability. First of all because of the 1986 Vaccine Injury Compensation Program, the National Injury Act: "No person may bring a civil action for damages in an amount greater than \$1,000 or in an unspecified amount against a vaccine administrator or manufacturer in a State or Federal court for damages arising from a vaccine-related injury or death associated with the administration of a vaccine after October 1, 1988. So ask your friends, please, you know, why would you take a product where the manufacturer doesn't believe in it enough to have liability? And I think this is where we are going to go as we move into the future. I want you to start planting this seed because I believe this is the moment we must bring down the 1986 Vaccine Injury Act along with any Prep (Public Readiness and Emergency Preparedness) Act protection. Remember, we're as big as we've ever been in this world. We have won, folks. We have won this

issue. When I first got started in this three to five years ago. I say five years ago. It was three to five percent of people were not vaccinating. Fifty-five percent or more in America. There it is. Just fifty percent of Americans plan to get a COVID-19 vaccine. So we're fifty percent. We have now got the majority. We have got that voting body. What do we want to vote for? You've got to start talking to everyone you meet who says "I'm not going to get that vaccine." Then say: "We can do something about that." What you've got to do is contact your politicians, your assembly members, especially those in your Federal government, right? Your Congressmen and your senators and women. Go to them and say: "You're never going to make me take any product made by this industry that doesn't have liability. Strike down the 1986 Act and then we'll think about it." Now I noticed some of you are going to say: "So Dell, you're starting to believe in the vaccine." Trust me. Here's a little inside secret that the CIA's watching right now. Dorit Reiss I know you're watching right now. Here's the plan. We're taking down the Act because you know damned well the moment this industry has liability back on them, this entire vaccine program is going to get wiped out. And you will never hear about the COVID19 vaccine for years. You won't hear about it for years. There will be no airline forcing it on you. There will be no government mandate because the manufacturer will never step up to pay for the amount of injury they know could be out there. They will tell you "One in a million are being injured". But you'll see the headlines right now. Pfizer and Moderna are standing to make 35 billion dollars from this vaccine this year alone. If injuries were one in a million I'm pretty sure they could afford to pay that person in court. Just like they do every other drug that has that ticker tape of you know problematic side effects that we see in the news. They pay for those in the court all the time. That's not bankrupting them. What is it about vaccines that they don't want to have any liability? Folks, this is going to be huge. We're going to get bigger and bigger on this. We all need to get in this together. I believe now is the time. Liability back on the industry. No liability no trust. No liability no trust. Remember what I said in the beginning of this entire show: who is responsible? We have to make the manufacturers responsible. We've got to make our doctors responsible. No more protections for you if you accidentally kill me by recommending a product that never went through a proper safety study. You are going to be held responsible. But for those of you watching this show: we, we are the responsible ones. We are responsible for our children's future on this Earth. And when you're walking through that airport with that sea of masks that you see, ask yourself "Was I a part of this? Is this the world I am leaving for my children? Am I really going to allow a world where they will never never breathe fresh air again? Where their immune systems will be a disaster because they are not acclimatized, they are not acclimated to the world we live in? Every time we put on that mask, folks, every time we make that OK we are hitting that buzzer. Not on somebody else, but on our children, on our future, we are zapping the future of this world by complying because some authority is telling us we should do it, and then they're the ones responsible. They are irresponsible. You have heard multiple world-renowned scientists today tell you they are beyond irresponsible. They are deadly. They are danger, they are dangerous. They are committing crimes against humanity. What are you going to do about it? Please. I pray that you recognize your power now. That your power is to get up, stand up, and not be the fifty percent that goes all the way to four hundred and fifty volts into the person. That you're that other fifty percent that is saying NO to the vaccine, that is saying "No liability, no trust. I'm going to sack the government now. " We're going to make this our world. We're not going to give into it. We're going to plant that seed of doubt, that one question so deep into every single person we love at these holiday dinners. In this experience we're going to plant that question. What is that question? That question is the light of truth. The simple truth. If masks work, why are we social distancing? If social distancing works, why are we locking down? If locking down works, why are we still wearing masks? And if all of that works why do we need a vaccine? And if the vaccine is safe, why does no-one want liability, responsibility? We can do this. We have gotten this far. This is our dream, not theirs. Own it. Live it. And remember, those great beings like Jesus, and Christmas, whether it's Hannukah and Moses that stood up for something, that stood up for our being, our connection to God, our creation is more powerful than

any of these lying, irresponsible detestable people. They are making decisions for us on this planet. Plant the seed of light. Be the beacon of light. That's how we celebrate these holidays. I'll see you on the other side.
